

## **CNC Lathe Automation**

### **Let's Talk Sophistication**

Take an already high-tech CNC lathe. Add a system for automated loading and unloading. Now you've got real productivity gains. The approach Sterling developed for a major manufacturer's gear blank production is just another example of how readily Sterling engineers can adapt automation to existing machine tools. If you want to boost productivity, but hate the thought of scrapping existing machinery, call us. We'll show you how our "keep it simple" approach to robotics and automation can benefit you.
