

Heavyweight Processing

A Heavyweight Idea

Take a 3,000-ton injection molding press. Team it with a Sterling Robotarm. The result - an ideal application of automation to replace human muscle. The parts going in the machine are far too large to be handled by even the brawniest worker. But they aren't too much for Sterling automation.

So no matter how big the job, call us.

We'll show you how our "keep it simple" approach to robotics and automation can benefit you.
