

Steel Parts Handling

No Sweat

Not since we helped a major automotive manufacturer automate the unloading of 40-pound steel bars from an open-sided gondola. No more grunt and groan. Instead, a Sterling Engineering and Manufacturing Robotarm handles the heavy work. We even developed an approach that compensates for random positioning of bars in the gondola.

Got some dirty jobs around your plant? Call us.

We'll show you how our "keep it simple" approach to robotics and automation can benefit you.
